

CASTLETOWN SCAFFOLD TOWERS LTD

Classic Towers

THE ULTIMATE ACCESS TOWER

4' x 4' base size

"Classic" Towers have been developed to satisfy a demand for a high quality but keenly priced versatile access tower system, which can be used for domestic and light industrial applications.

"Classic" Towers are manufactured from prime quality pre-galvanised mild steel tube which conforms to British Standard BS 6323 Part 5 1982.

The galvanised finish on the tube provides excellent resistance to corrosion which keeps the product looking good for many years, whereas a dip-painted tower starts to show the rust almost immediately where the paint has not taken.

We are so confident in the superior quality of our product that we give "Classic" Towers a comprehensive FIVE YEAR GUARANTEE against faulty materials or workmanship.

6' x 4' base size shows optional double handrail

4' x 2'6" base size

A comprehensive range of accessories compliments the "Classic" Tower system including Stabilisers (which come apart for easy transportation – see photograph), internal ladders, trapdoor decking, adjustable locking castors, adjustable bases and locking castors.

"Classic" Towers are available in three useful base sizes – 4' x 2' 6" for narrow gaps etc., 4' x 4' for most domestic access problems and the 6' x 4' for tasks which demand greater platform heights for example in a factory environment.

Tube sizes and wall thicknesses on "Classic" towers are: –

Uprights on all frame sizes	– 38.1 mm (1½")
Horizontals on 2'6" & 4' frames, braces & handrails	– 31.8 mm (1¼")
Horizontals on 6' x 4' frames	– 38.1 mm (1½")

38.1 mm o.d. tube is 16 gauge (1.6 mm)

31.8 mm o.d. tube is 18 gauge (1.2 mm)
